HYPERSEN TECHNOLOGIES CO., LTD. 海伯森技术

HPS-3D640

OpenNI2 使用手册

目录

一、SDK 说明

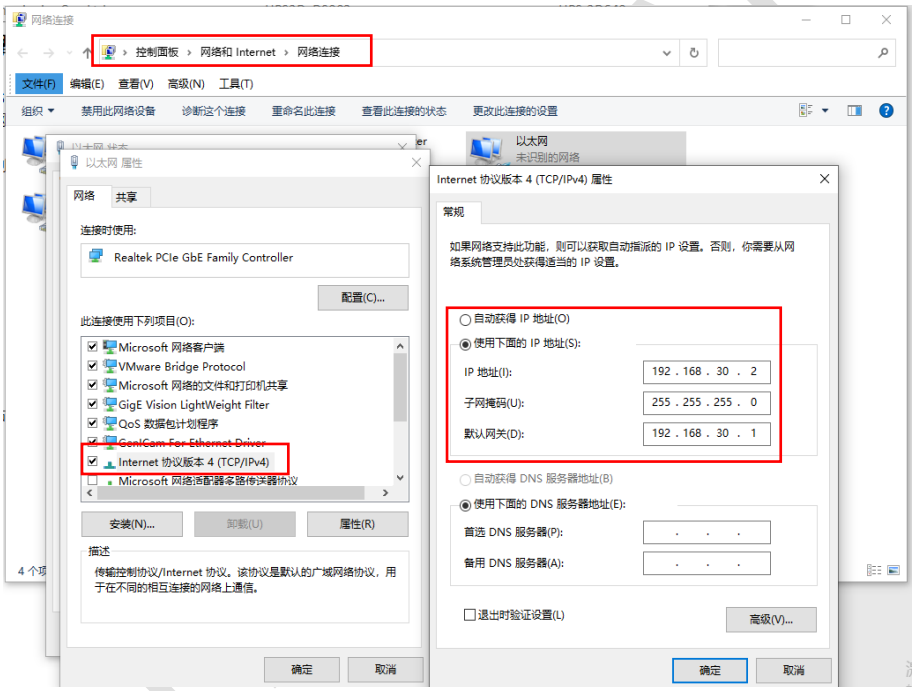
HPS-3D640 系列已适配 OpenNI2.2 以及 OpenNI2.3 库，支持 Windows、Linux 平台开发使用。

二、设备连接

HPS-3D640-L 通过 LAN 接口与主机通讯。

传感器默认 IP 地址是 192.168.30.202， 端口是 12345。

传感器网线接入主机的以太网口后，需要在主机配置 ip 地址和子网掩码，其中 IP 地址必须与传感器 IP 配置在同一网段下，如下图。



三、将 OpenNI 集成到 IDE 中

以下是在 Microsoft Visual Studio 平台下 OpenNI 的集成。

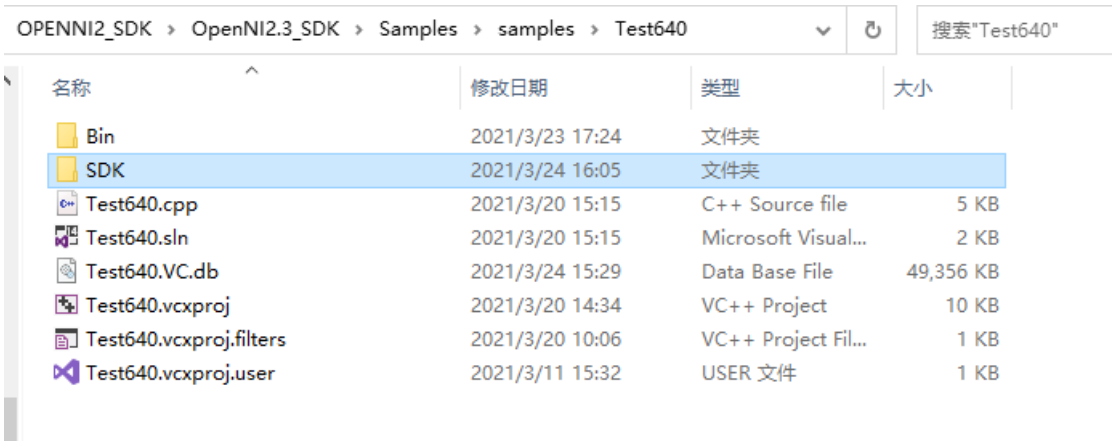
3.1 Visual Studio 平台下环境配置及集成到 IDE 中

xxx.lib 和 xxx.dll 适合在 Windows 操作系统平台使用，这里以 VS2015 环境为例。

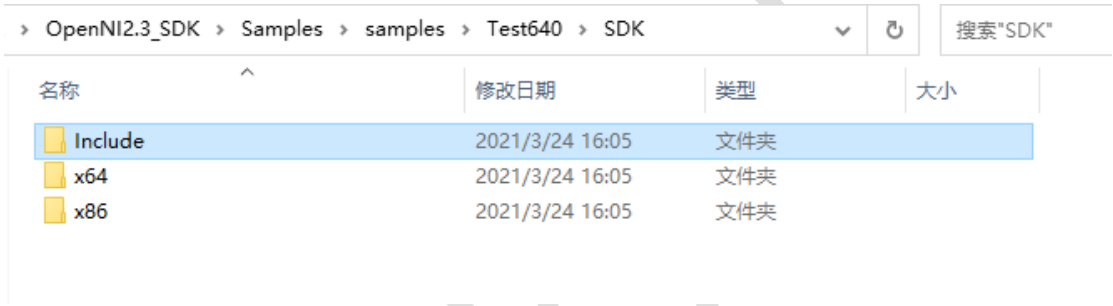
3.1.1 工程环境配置与集成

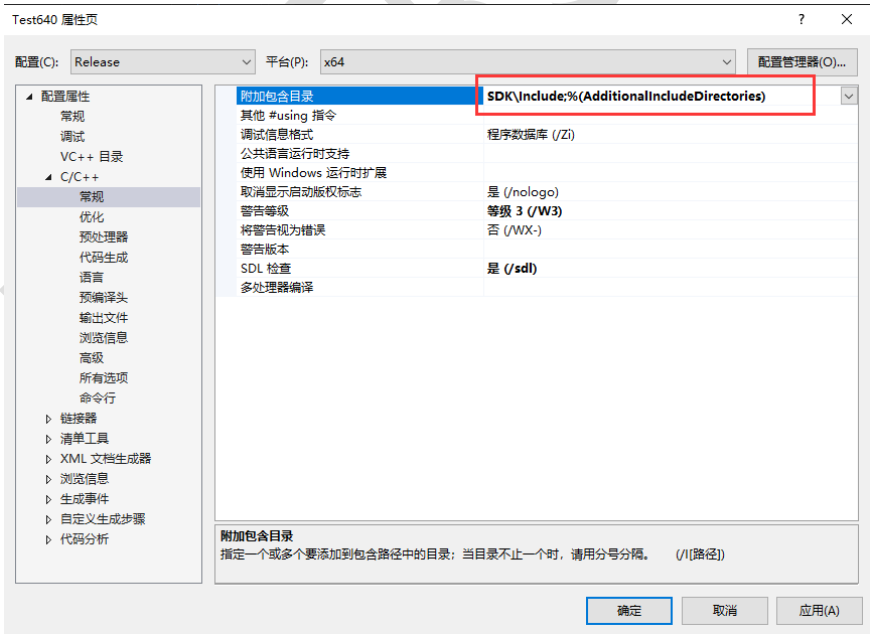
1、添加头文件包含路径

a、将 OPENI 的 SDK 拷贝到用户指定的路径下。



b、点击项目 - 属性 - C/C++ -常规。在附加包含目录下指定头文件的路径。（SDK 文件夹中的 Include 文件夹）

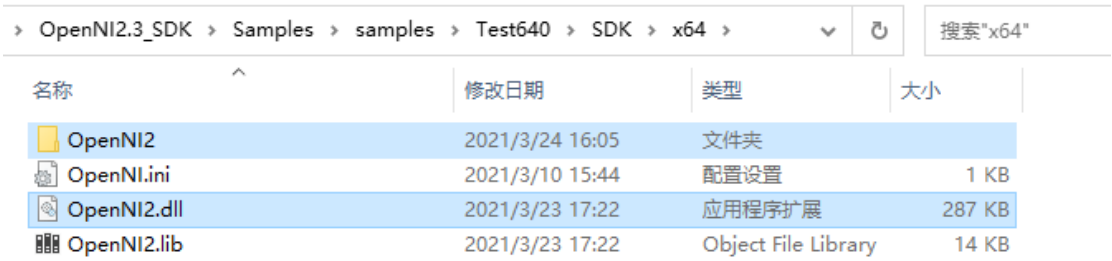


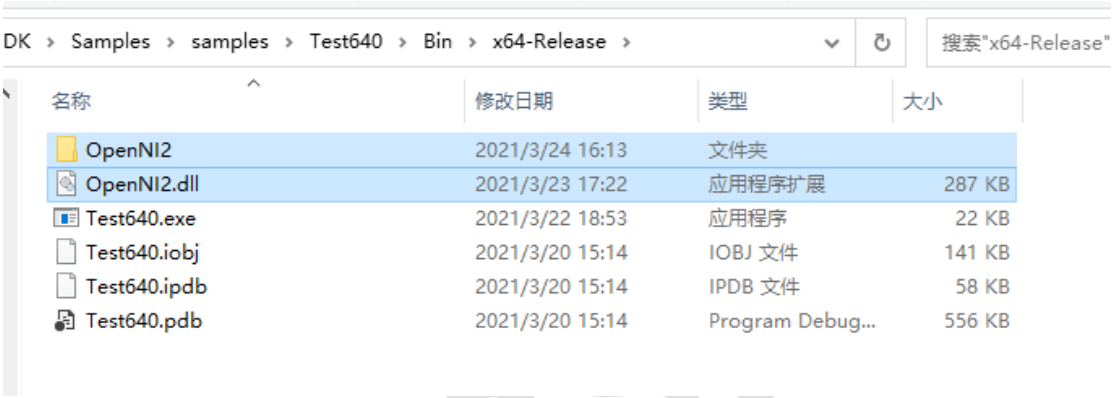


2、添加库引用和库的路径

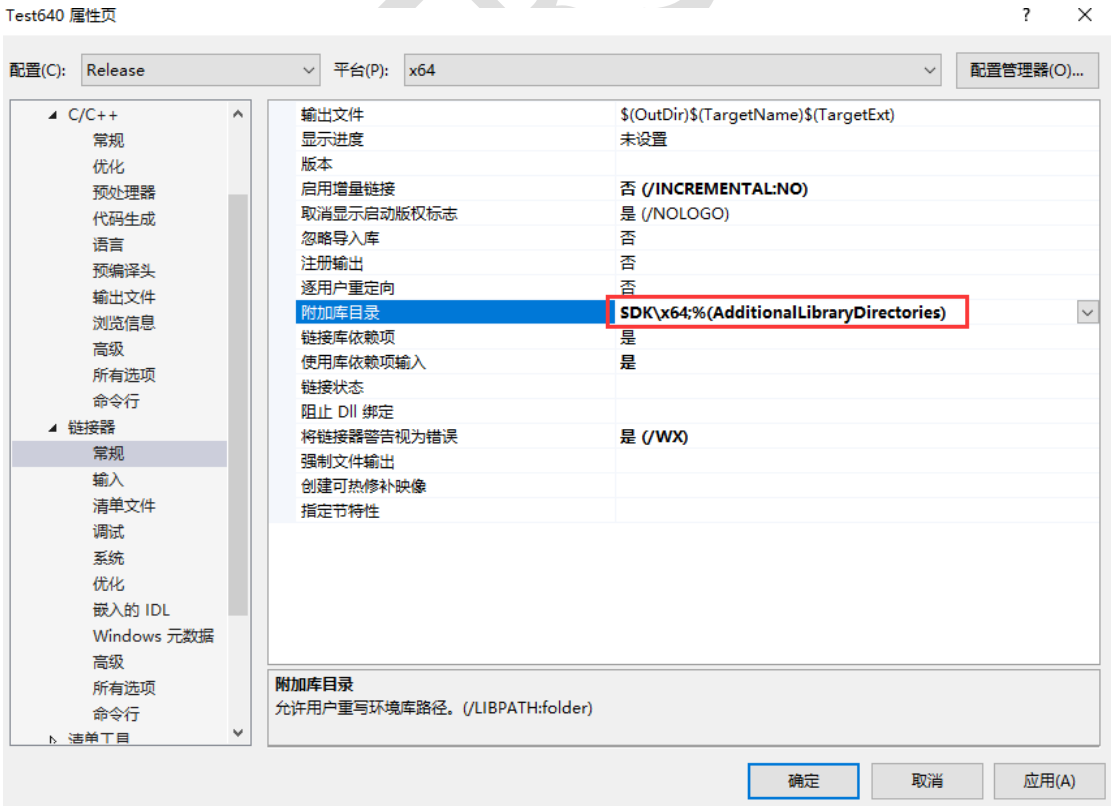
a、根据用户 Visual Studio 的平台，选择 x64 或 x86 目录下的 SDK 文件，这里以 x64 为例。

b、将 x64 目录下 OpenNI2.dll 以及 OpenNI2 文件夹拷贝到程序运行的目录下；

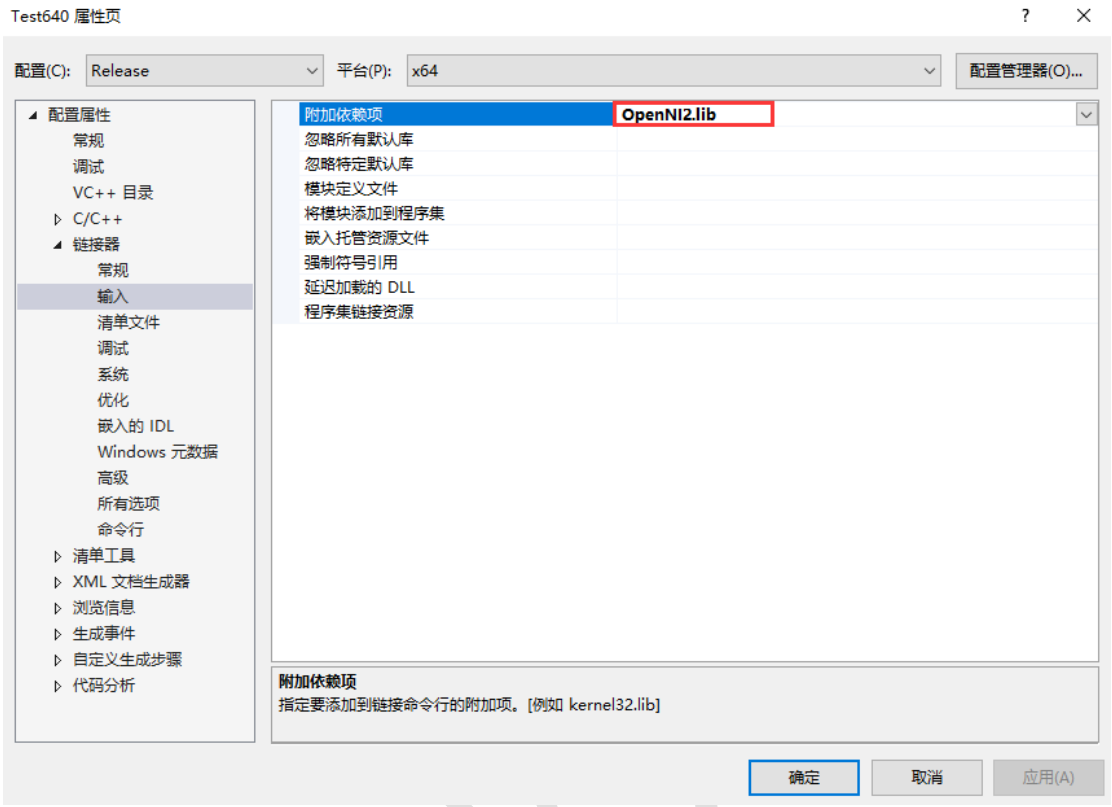




c、点击项目 - 属性 - 链接器 - 常规。在附加库目录中指定 OpenNI2.lib 的路径。



d、点击项目 - 属性 - 链接器 – 输入。在附加依赖项中加入 OpenNI2.lib。



3.1.2 在用户项目中使用 OpenNI2

以下为获取传感器数据的简单步骤，更具体的请参考 OpenNI_SDK 中的示例代码。

1、 包含头文件

```
#include <OpenNI.h>
#include <conio.h> //非必须
```

2、 初始化 OpenNI 的 API

```
//初始化OpenNI
Status nRetVal = openni::OpenNI::initialize();
if (nRetVal != STATUS_OK)
{
    return 1;
}
```

3、 打开设备

```
Device device;
//使用URI打开设备，URI格式IP=x,PORT=x(x根据设备参数设置)
nRetVal = device.open("IP=192.168.30.202,PORT=12345");
if (nRetVal != STATUS_OK)
{
    printf("Device open failed! %s\n", OpenNI::getExtendedError());
    OpenNI::shutdown();
    return 2;
}
```

4、 创建流

```
//创建流
VideoStream depth;
//判断设备是否支持深度流
if (device.getSensorInfo(SENSOR_DEPTH) != NULL)
{
    nRetVal = depth.create(device, SENSOR_DEPTH);
    if (nRetVal != STATUS_OK)
    {
        printf("Couldn't create depth stream! %s\n", OpenNI::getExtendedError());
        return 3;
    }
}
```

注意：HPS-3D640 只支持创建深度流

5、 启动深度流开始输出数据

```
//开始输出深度数据
nRetVal = depth.start();
if (nRetVal != STATUS_OK)
{
    printf("Couldn't start the depth stream! %s\n", OpenNI::getExtendedError());
    return 4;
}
```

6、 获取深度流中的数据

```
//创建单帧
VideoFrameRef frame;
//敲击键盘退出
while (!_kbhit())
{
    int ReadyStreamIndex;
    VideoStream* pStream = &depth;
    //等待当前流的一帧数据
    nRetVal = OpenNI::waitForAnyStream(&pStream, 1, &ReadyStreamIndex, 300);
    if (nRetVal != STATUS_OK)
    {
        printf("Wait Time Out! %s\n", OpenNI::getExtendedError());
        continue;
    }
    //读取当前流中的一帧数据
    nRetVal = depth.readFrame(&frame);
    if (nRetVal != STATUS_OK)
    {
        printf("Read failed! %s\n", OpenNI::getExtendedError());
        continue;
    }
```

```
    //获取当前帧的数据
    DepthPixel* depthData = (DepthPixel*)frame.getData();
    //打印中心点数据
    printf("Timestamp:%d depthData:%d\n", frame.getTimestamp(),
depthData[307200/2]);
}
```

7、运行结束，释放资源

```
//停止流
depth.stop();
//销毁流
depth.destroy();
//关闭设备
device.close();
//卸载驱动
openni::OpenNI::shutdown();
return openni::STATUS_OK;
```

四、通过 PCL 框架调用 OpenNI 并集成到 IDE 中

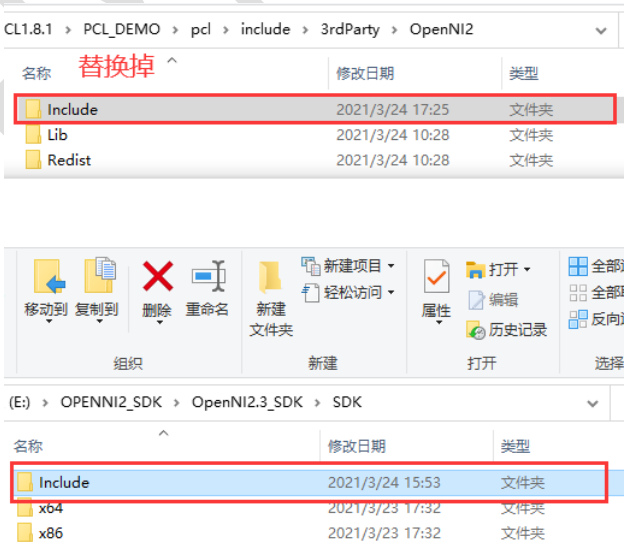
4.1 Visual Studio 平台下环境配置及集成到 IDE 中

以 VS2015 环境为例。

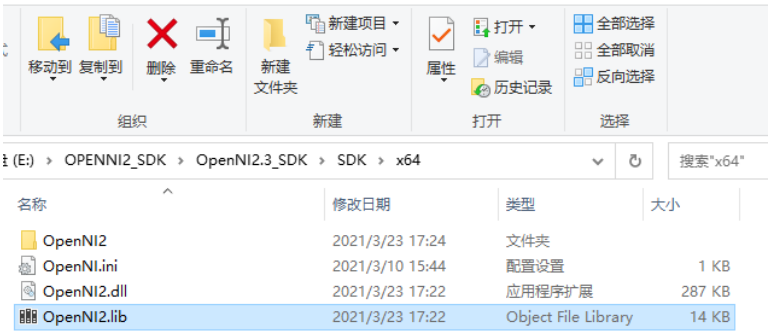
4.1.1 工程环境配置与集成

1、将 PCL 第三方库中的 OpenNI2 替换成 Hypersen 提供的 OpenNI2 中的内容

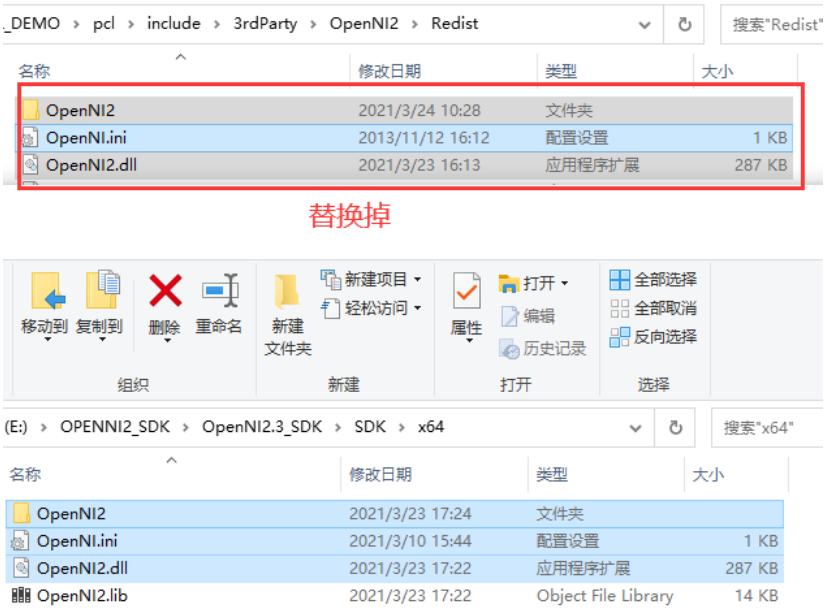
a、替换 Include 中的所有文件。



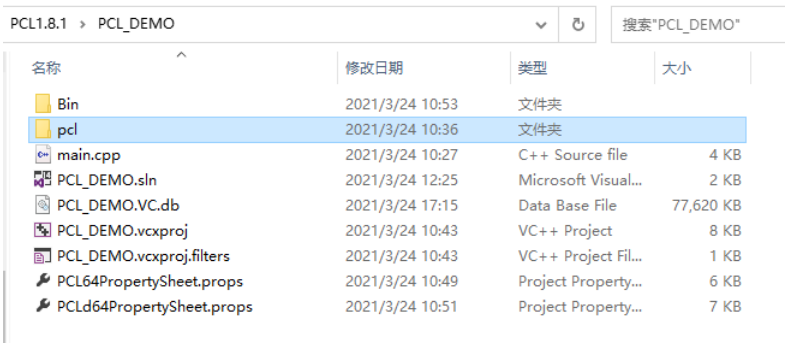
b、替换.lib 文件。



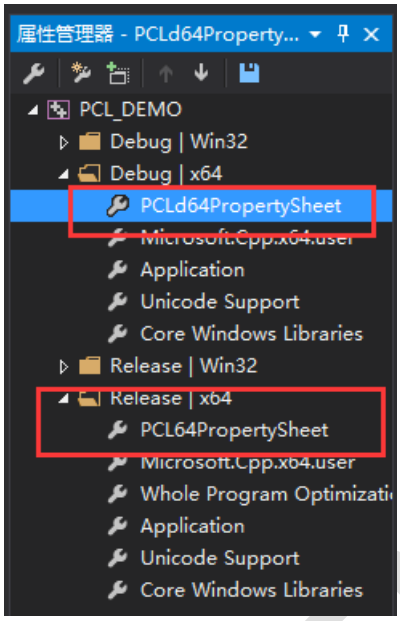
c、替换以下文件



2、将 PCL 库拷贝到项目文件中



3、将 PCLd64PropertySheet 和 PCL64ProPertySheet 加入属性管理器中

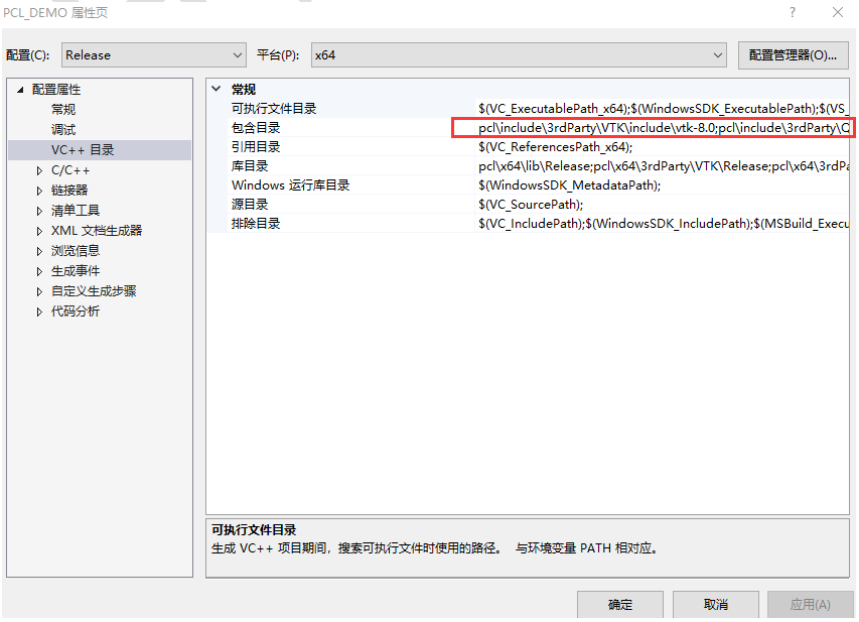


这两个文件已经配置好了依赖环境，直接导入到项目即可，若没有这里文件，则需要参照以下步骤自行配置环境。

4、设置库环境

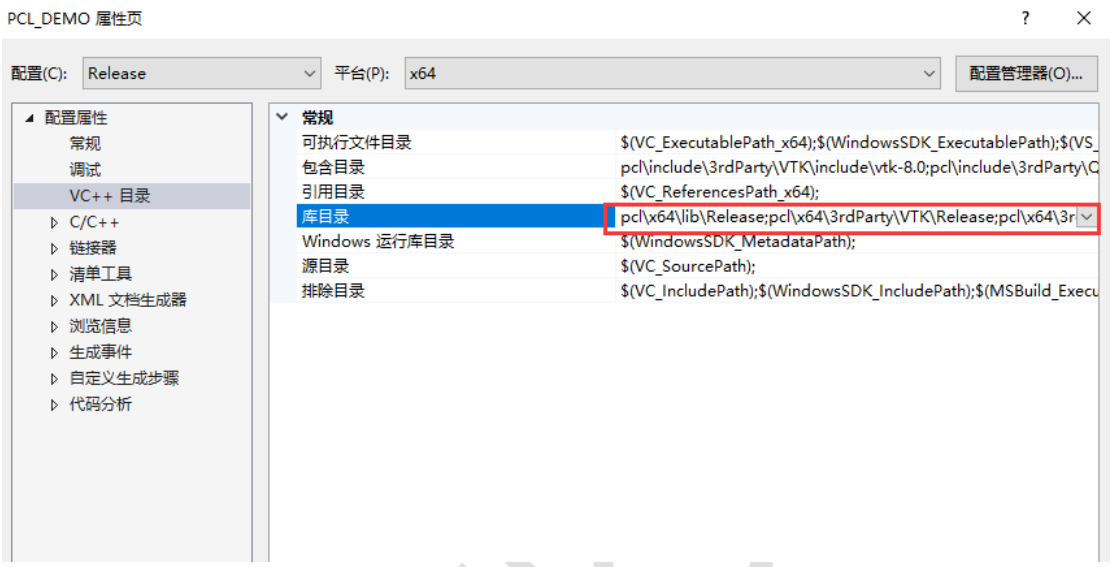
a、点击项目 - 属性 - VC++目录。在包含目录下添加以下路径:

```
pcl\include\3rdParty\VTK\include\vtk-8.0
pcl\include\3rdParty\Qhull\include
pcl\include\3rdParty\OpenNI2\Include
pcl\include\3rdParty\FLANN\include\flann
pcl\include\3rdParty\FLANN\include
pcl\include\3rdParty\Eigen\eigen3
pcl\include\3rdParty\Boost\include\boost-1_64
pcl\include
pcl\include\pcl
```



b、点击项目 - 属性 - 库目录。在库目录下添加以下路径:

```
pcl\x64\lib\Release
pcl\x64\3rdParty\VTK\Release
pcl\x64\3rdParty\Qhull\lib\Release
pcl\x64\3rdParty\OpenNI2\Lib
pcl\x64\3rdParty\FLANN\lib\Release
pcl\x64\3rdParty\Boost\lib\Release
```



d、点击项目 - 属性 - 链接器 - 输入。在附加依赖选项中填入以下内容。

```
pcl_common_release.lib
pcl_features_release.lib
pcl_filters_release.lib
pcl_io_release.lib
pcl_io_ply_release.lib
pcl_kdtree_release.lib
pcl_keypoints_release.lib
pcl_ml_release.lib
pcl_octree_release.lib
pcl_outofcore_release.lib
pcl_people_release.lib
pcl_recognition_release.lib
pcl_registration_release.lib
pcl_sample_consensus_release.lib
pcl_search_release.lib
pcl_segmentation_release.lib
pcl_stereo_release.lib
pcl_surface_release.lib
pcl_tracking_release.lib
pcl_visualization_release.lib

4.1.2 在用户项目中使用 PCL

以下为获取传感器数据并转换成点云的步骤，更具体的请参考 DOME 中的示例代码。

1、包含头文件

```
#include <pcl/common/common_headers.h>
#include <pcl/visualization/pcl_visualizer.h>
#include <iostream>
#include <OpenNI.h>
```

2、声明全局变量及宏定义

```
#define HPS_RESOLUTION_X_640 640
#define HPS_RESOLUTION_Y_480 480

openni::Device mDevice;
openni::VideoStream mDepth;
```

3、初始化 OpenNI 中的 API

```
//初始化OpenNI2中的API
openni::Status nRetVal = openni::OpenNI::initialize();
if (nRetVal != openni::STATUS_OK) {
    std::cerr << "OpenNI Initial Error: " << openni::OpenNI::getExtendedError() <<
std::endl;
    return -1;
}
```

4、使用 URI 打开设备

```
//使用URI打开设备，URI格式IP=x,PORT=x(x根据设备参数设置)
nRetVal = mDevice.open("IP=192.168.30.202,PORT=12345");
if (nRetVal != openni::STATUS_OK) {
    std::cerr << "Can't Open Device: " << openni::OpenNI::getExtendedError() <<
std::endl;
    return -1;
}
```

5、创建深度流

```
//判断设备是否支持深度流
if (mDevice.getSensorInfo(openni::SENSOR_DEPTH) != NULL)
{
    //关联设备
    nRetVal = mDepth.create(mDevice, openni::SENSOR_DEPTH);
    if (nRetVal != openni::STATUS_OK)
    {
    std::cerr << "Can't create depth stream: " << openni::OpenNI::getExtendedError()
<< std::endl;
    return -1;
    }
    //开启深度流
    mDepth.start();
```

```
    }
else {
    std::cerr << "ERROR: This device does not have depth sensor" << std::endl;
    return -1;
}
```

6、创建 PCL 点云对象

```
//创建pcl云
pcl::PointCloud<pcl::PointXYZ>::Ptr point_XYZ(new pcl::PointCloud<pcl::PointXYZ>());
point_XYZ->width = HPS_RESOLUTION_X_640;
point_XYZ->height = HPS_RESOLUTION_Y_480;
point_XYZ->points.resize(point_XYZ->width*point_XYZ->height);
```

7、 PCL 可视化

```
//pcl可视化
pcl::visualization::PCLVisualizer::Ptr m_pViewer(new
pcl::visualization::PCLVisualizer("Viewer"));
m_pViewer->setCameraPosition(0, 0, -2, 0, -1, 0, 0);
m_pViewer->addCoordinateSystem(0.3);
while (!m_pViewer->wasStopped())
{
    Depth2PointCloud(point_XYZ); //将深度数据转还成点云数据
    m_pViewer->addPointCloud<pcl::PointXYZ>(point_XYZ, "cloud");
    m_pViewer->spinOnce();
    m_pViewer->removeAllPointClouds();
}
```

其中，将深度数据转换成点云数据的示例如下:

```
//将深度数据转换成点云数据
bool Depth2PointCloud(pcl::PointCloud<pcl::PointXYZ>::Ptr cloud_XYZRGB)
{
    openni::VideoFrameRef frame;
    //获取一帧数据
    if (mDepth.readFrame(&frame) == openni::STATUS_OK)
    {
        float fx, fy, fz;
        int index = 0;
        openni::DepthPixel *pDepth = (openni::DepthPixel*)frame.getData();
        for (int y = 0; y < frame.getHeight(); y++)
        {
            for (int x = 0; x < frame.getWidth(); x++)
            {
                openni::CoordinateConverter::convertDepthToWorld(mDepth, x +
frame.getCropOriginX(), y + frame.getCropOriginY(), pDepth[index], &fx, &fy, &fz);
                //将无效数据过滤
                if (fz >= 60000)
                {
```

```
                    cloud_XYZRGB->points[index].x = 0;
                    cloud_XYZRGB->points[index].y = 0;
                    cloud_XYZRGB->points[index].z = 0;
                }
                else
                {
                    cloud_XYZRGB->points[index].x = fx / 1000; //将单位从MM转换成M
                    cloud_XYZRGB->points[index].y = fy / 1000;
                    cloud_XYZRGB->points[index].z = fz / 1000;
                }
                index++;
            }
        }
        return true;
    }
    else {
        std::cout << "Depth2PointCloud: fail to read frame from depth stream" <<
std::endl;
        return false;
    }
}
```

8、运行结束，释放资源

```
//停止流
mDepth.stop();
//销毁流
mDepth.destroy();
//关闭设备
mDevice.close();
//卸载OPENNI驱动
openni::OpenNI::shutdown();
return 0;
```

五、修订历史记录

Date	Revision	Description
2021/04/09	1.0.0	初始版本。
